

Develop a Visual C# Form application that uses the attached Student Access Database. The database consists of two tables: students and classes.

The student table contains the following fields:

Field Name	Data Type
Student ID	Number
Last Name	Text
First Name	Text
Gender	Text
Major	Text

The Classes table consists of the following fields:

Field Name	Data Type
Student ID	Number
Course	Text
Section	Text
Grade	Number

The application will consist of two forms. The first form will display a drop down that displays the student's last name and first name. The application should allow the operator to select a student.

In addition the form will consist of two buttons one to close the form and the second to open a second form that will display the students last name, first name, gender and major. In addition, the form will contain a data grid of the student's class schedule. Below is a sample screen. The form will have a button to close the form and return to the first form.

Students Classes

Student ID

Name

Major

Gender

Student ID	Course	Section	Grade
2169980	Computer Science 101	A	70
2169980	Math 205	B	83
* 2169980
